

# Energy Infrastructure

With greater demand for traditional and renewable power, along with the advent of new technologies and innovations, utilities, stakeholders, and state and local government look to us to help them address and resolve complex legal issues.

Throughout the years, our multidisciplinary team of attorneys have advised various energy industry participants in a number of legal, business, and regulatory issues. With broad experience and extensive practical knowledge, we successfully navigate the rapidly evolving and litigious energy landscape. Proactive risk management, through innovative and unique legal solutions, is the cornerstone of our holistic approach.

Our attorneys have advised clients through numerous complex transactions, including:

- Construction and development projects
- Government and community relations
- Power-purchase agreements
- Regulatory approval and compliance

Across the region and beyond, we've helped companies involved in oil, natural gas, electricity, renewables, and other resources establish operations, expand their opportunities, and improve their bottom lines. For example, we currently represent ITC Holdings, Inc., the country's largest independent transmission company, and played an important role in the successful launches of its Simpson-Batavia, Weeds Lake, and Thumb Loop Transmission Lines, which now provide power to customers and communities across Michigan.
